

Construction Inspection

On-site construction supervision is necessary to ensure the protection of our client's investments. For this reason, developers, contractors, government agencies, and corporations insist on the expertise of Karins and Associates during construction.

Our construction inspection professionals are knowledgeable and experienced in a multitude of projects, including but not limited to the construction of utilities and infrastructure for residential, commercial, industrial, institutional, and public works projects. Karins and Associates provide the needed oversight during various phases of the construction process from the preparation of computer-aided construction layout plans to construction review services. These services are also supported using the latest available survey technologies including electronic data collection, Robotic total-stations, GPS survey equipment, and 3D laser scanning services.

Karins and Associates has staff certified by the Delaware Natural Resources and Environmental Control (DNREC) to provide Certified Construction Reviewer (CCR) services, for compliance with sediment and stormwater regulations and NPDES requirements. Karins also has extensive experience in the design and construction inspection of the installation of underground piping, pavement, and stormwater facilities.
