

Stormwater Management Engineering

Stormwater management has increasingly become an integral part of almost all land development projects, impacting everything from site design to schedule and profitability. With the constantly shifting regulatory climate, enlisting the assistance of an experienced design professional is more important than ever. Often times, a well engineered stormwater management design can define the overall success of a project.

Karins and Associates provides expert stormwater management analysis and design to clients in both the public and private sectors. We have provided countless designs, incorporating traditional ponds, bioretention, biofiltration, underground storage, and structural water quality devices. Our design expertise comes from the combined experience of our staff of engineers who are well versed in current and forthcoming water quality regulations related to the National Pollutant Discharge Elimination System (NPDES) permit program. We pride ourselves on providing a budget friendly and innovative design that is functional, constructible, and aesthetically pleasing.

For more information on stormwater management and how Karins and Associates can help make your next project better, please contact us at (302) 369-2900
